

Path Problem 53 File not found

Occasionally if a power outage occurs or TMP is reinstalled for any reason and the data path is not modified/verified during the install application, the path referencing the TMP data folder not be correct and when starting TMP you will receive errors similar to,

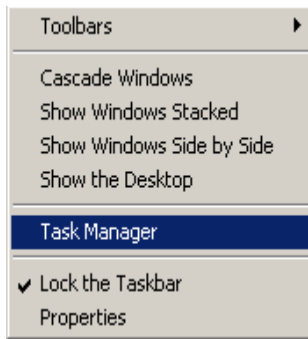

To correct,

If TMP is still running and the message above is displayed use Task manager to stop The Marina Program, and the TMP Std Utility Services. If you know how to use Task Manager and perform this function skip to the section entitled MANUALLY CORRECT THE PATH.

By using the right mouse button and “right-mouse” clicking on an empty spot on your task bar the taskbar is normally located on the bottom of your window, where the clock is normally located,

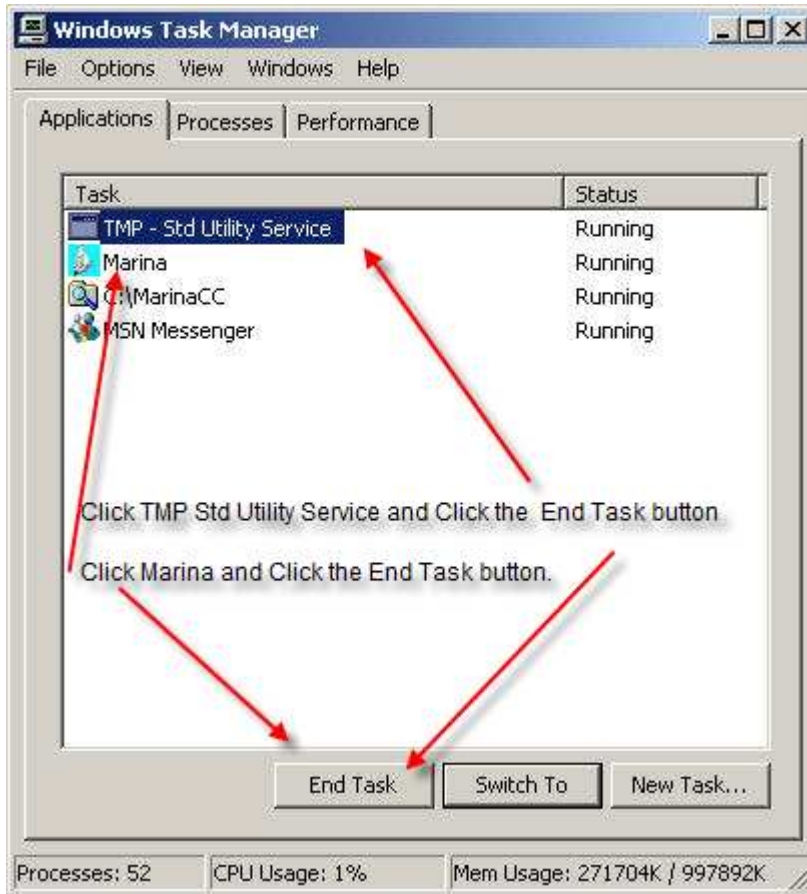

Right-mouse clicking on the task bar will display the following context menu,

Select Task Manager,

The following dialog will be displayed,

Click on TMP – Std Utility Service and click the End Task button

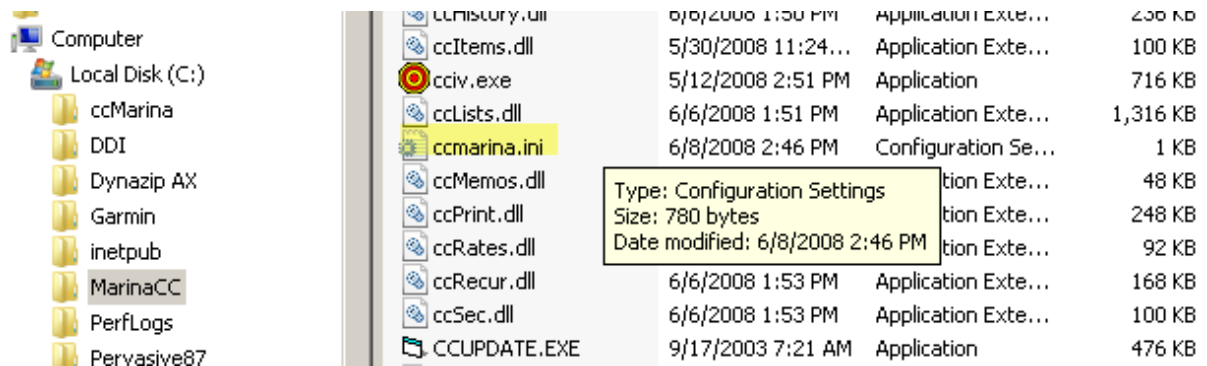

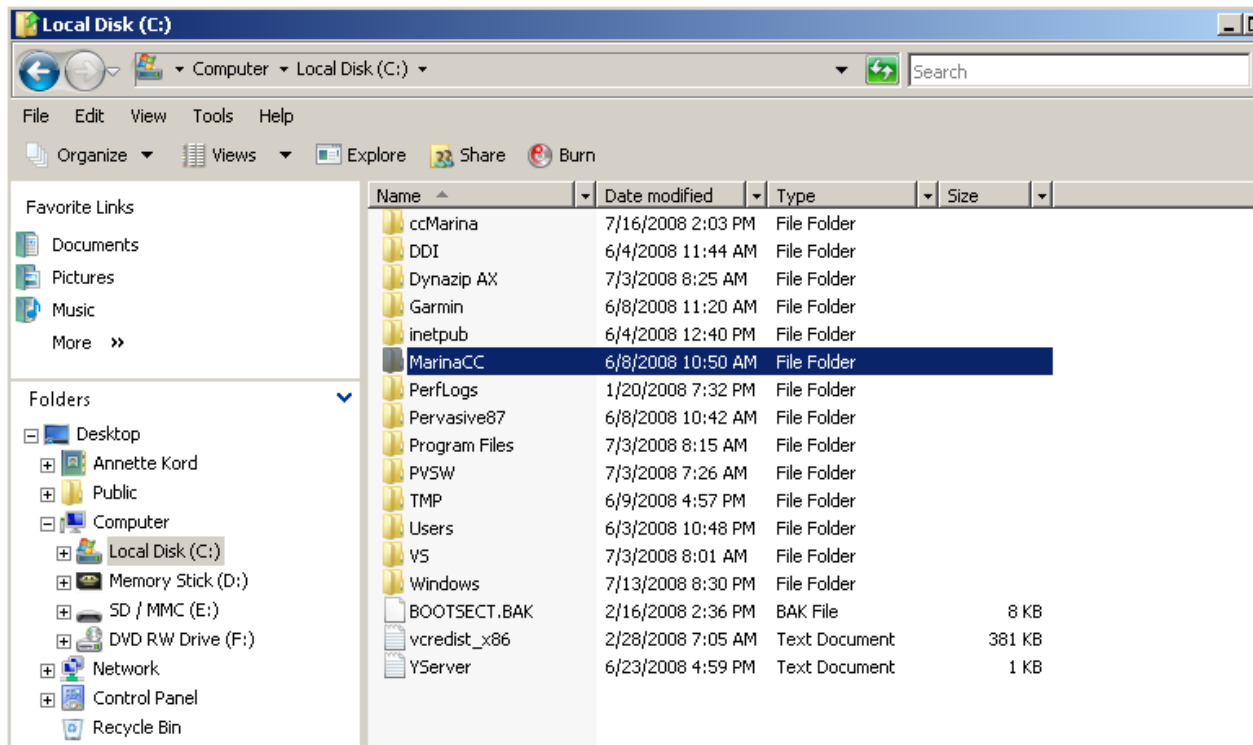

Click on Marina and click the End Task Button

If you receive the dialog entitled End Program – Marina.Exe or End Program TMP Std Utility Service click the End Now button.

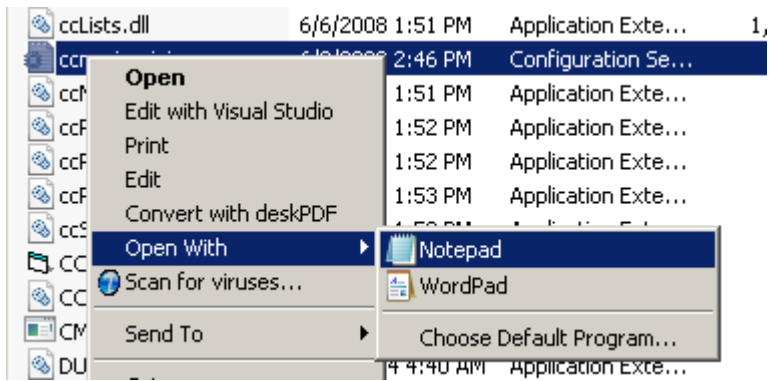

Manually Correct the Path

Using Windows Explorer open your TMP program folder normally c:\MARINAcc.

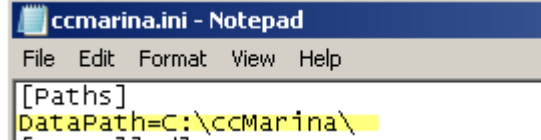

Locate the file ccMarina.ini and open it using Notepad.

Right-mouse click on ccmarina.ini choose to open with notepad,

The path specified in the section entitled [Paths] parameter/token DataPath should be set to your data installation's specific data path,

So if your data is located on M: change to DataPath=M:
